Paris, October 30th 2007

Dear Colleague,

The European Regulation on Medicinal Products in Children has been voted by the European Parliament in December 2006. The Regulation includes incentives to the manufacturers to evaluate medicinal products in children. The number of studies performed in children is therefore expected to increase. The actors of drug evaluation in children are to be prepared to this new era including Academics, Pharmaceutical Industries and Regulatory actors.

We are now organizing the sixth European Course on the evaluation of medicinal products in children, in English, in Paris (Paris V University, France). This teaching programme has been organized on behalf of the European Society for Developmental Perinatal and Paediatric Pharmacology (ESDP), I have been the General Secretary for 7 consecutive years. This teaching programme is also a Paediatric module of a broader teaching programme : Eudipharm (European Diploma for Pharmaceutical Medicine) organized by Pr. Jean-Pierre BOISSEL (Faculté Laennec - Lyon) and Pr. Jean-Marc HUSSON.

This teaching programme began in 2003 and has been very much appreciated since then.

You will find enclosed several documents regarding the 2008 teaching programme we are now organizing including its objectives, the subscription form, three graphs concerning the distribution of teachers and students per country and the students professional profiles. Could you forward these documents to your colleagues and potential participants interested in such a programme ?

Do you have the possibility to do it through an internal publication ? through a website ? and through an individual e-mail to your correspondants ?

I hope that it will be possible for you to satisfy this request. I remain available for any further question you could ask.

Yours Sincerely,

Pr. Gerard PONS
